

SafeHome AI

Home safety assessment built by a physical therapist

Is your home set up to keep you safe?

Most falls happen at home — in bathrooms, on stairs, on the way to the bathroom at night. Most of the fixes are simple and cost less than you'd expect. The hard part is knowing where to start.

SafeHome AI turns photos of your rooms into a clear list of what to fix first, what it costs, and what's already fine. Built by a physical therapist who specializes in helping people stay in their own homes.

How it works

- 1 Photograph your rooms with your phone.
- 2 Answer a few questions about health and mobility.
- 3 Get your report in minutes — what to fix first, and what it costs.

safehome-ai.com

Free for two rooms. No signup.

Scan the code or type the address into any browser.

Your photos are deleted within 30 minutes. Your health information is never retained after your report is generated.
